

Share Output Options with Coworkers

Description

- If you want to publish your set of output modifications for all other users in your facility to use, you must first save your output modifications. See document entitled “How Can I Save My Output Options for Future Use?”
- Once saved, open your output modifications template (found under “My Custom Output”) by clicking “Modify”
- Click “Publish” at the bottom of the Modifications screen

- The template with your saved output modifications will now be saved under the “Published Output” folder found in the full Analysis>Output Options menu. In this example, we have created 4 custom output options for CLABSI data, which can be found in Published Output> Device-Associated Module> Central Line-Associated BSI

- All users in your facility with rights to analyze data will be able to run this output option on their generated datasets
